

The General Social Survey

Addition of Religious Tradition in the GSS

GSS Methodological Report #146
March 2026

Authors:
Rachel Sparkman
Brian M. Wells
Benjamin Schapiro

SUMMARY

Increased concerns of disclosure risk led to a variety of changes beginning with the 2024 General Social Survey (GSS) cross-section data release. As such, new variables are being constructed that preserve the rich data the GSS collects, while balancing data utility and respondent privacy. With the removal of variables identifying specific Protestant denominations (DENOM, expanded version) and other Protestant denominations (OTHER) from the public-use data file, the GSS PIs and research team looked to other resources to preserve detailed religious affiliation.

We use previously released (1972-2024) and unreleased (2024) GSS data to construct a user-generated variable that measures religious tradition, RELTRAD (Steensland et al. 2000). We then adapted that code to construct a new variable of religious tradition at age 16, RELTRAD16. In doing so, the GSS continues to make strides to protect respondent identity while providing robust data on religious affiliation.

The respondent-level RELTRAD was made available in Release 2 of the 2024 GSS cross-section. Religious tradition at age 16 (RELTRAD16) was made available in Release 3. RELTRAD and RELTRAD16 are available to the public on the GSS website¹ and on the GSS Data Explorer.²

BACKGROUND

NORC has enhanced privacy protections in the GSS and developed a plan for the 2024 data release to reduce identification risks, especially in demographic variables. The GSS has always been committed to ensuring the confidentiality of respondents and has engaged in various forms of disclosure review over its 50-year history. Due to recent advances in computing and the growing availability of personal data, the risk of re-identifying GSS respondents has increased. In response, the GSS team implemented changes in the 2024 data release, restricting or coarsening variables that pose higher disclosure risks. Among key religious variables, the GSS has coarsened, the collapsing or top/bottom coding of sensitive or low-frequency categories, or restricted the release. See [Appendix A](#) for the full list of religious identity variables in the GSS.

Historically, the GSS has released a series of detailed religious affiliation measures, including RELIG, DENOM, OTHER, and JEW (as well as its corresponding variants for the respondent at age 16 and the respondent's spouse/partner). Following the disclosure review process for the 2024 GSS Cross-section described above, reductions in the level of detail provided on religious affiliation were required. As such, DENOM was coarsened down to the seven major denominations (consistent with what the GSS captured during its first decade), and OTHER and JEW were removed from the public datafile. The historical DENOM variable, OTHER, and JEW will be available via the sensitive data process. These changes also apply to the corresponding variants of these variables (e.g., RELIG16, SPDEN).

To compensate for the loss of detailed religious affiliation data in the public dataset, the GSS introduced a new religion variable that offers more nuance than RELIG and the coarsened version of DENOM.³ GSS PIs chose to replicate and formally release a heavily cited (e.g., Olson et al. 2006; Shelt 2018, Smidt 2019) variable generated

¹ <https://gss.norc.org/get-the-data.html>

² <https://gssdataexplorer.norc.org/>

³ DENOM was coarsened to the larger groups of Protestant denominations (e.g., "Baptist") instead of specific Protestant denominations (e.g., "American Baptist Association", "Southern Baptist Convention") now historically referenced in DENOM_7222. Please see the [2024 GSS codebook](#) to read more about the coarsening procedure.

from these impacted variables: RELTRAD, a measure of religious tradition. Our goal was to strictly reproduce the approach detailed in Steensland et al. (2000) along with the subsequent corrections from Stetzer and Burge (2015), without any additional religious coding by the GSS team in its replication. We then use that existing code to create the corresponding variants for the respondent at age 16, where respondent information is available (see [Methods](#) below). Details regarding the creation of RELTRAD and RELTRAD16 are covered in [Appendix B](#) and [C](#), respectively.

METHODS

Data

We use previously released (1972-2022) and unreleased (2024) GSS data to reproduce the user-generated variable RELTRAD. RELTRAD uses the following GSS variables to create the respondent's religious tradition:

- RELIG – This is the primary variable asking respondents, “What is your religious preference?” Respondents can choose from nine categories.
- DENOM – Respondents are routed to the denomination series of questions if they choose “Protestant” under RELIG.
- OTHER - This is a recoded variable based on verbatim responses from respondents after choosing “other” Protestant choices.
- ATTEND – This question measures religious behavior by asking respondents, “How often do you attend religious services?” Response options range from “never” to “several times a week.”
- RACE - This race variable categorizes respondents into three categories: White, Black, or Other.

We use the same data to adapt the code to religious tradition at age 16 (RELTRAD16), apart from ATTEND. The GSS does not ask about respondents' religious attendance at age 16, and there is no comparable variable to replace this measure. RELTRAD16 uses the following GSS variables to create the respondent's religious tradition at age 16:

- RELIG16 – This is the primary variable asking respondents, “In what religion were you raised?” Respondents can choose from nine categories.
- DENOM16 – Respondents are routed to the denomination series of questions if they choose “Protestant” under RELIG16.
- OTH16 - This is a recoded variable based on verbatim responses from respondents after choosing “other” Protestant choices.
- RACE - This race variable categorizes respondents into three categories: White, Black, or Other.

Variable Construction

First, we recreate the RELTRAD code made available from Steensland et al. (2000), along with the subsequent corrections from Stetzer and Burge (2015), in Stata with the R4 release of the 1972-2022 public use data file. Here, we identify that the most recent RELTRAD code we reference (Steensland et al. 2000) stops at OTHER category 148. Please see [Appendix B](#) for the SAS code used to create RELTRAD.

Next, we adapt that code to SAS, where the current GSS is primarily cleaned and disseminated for public use. Because there are other Protestant denominations (variables OTHER and OTH16) that have categories that can go to value 225, we assign the uncategorized values (149+) to “.z: Variable-specific reserve code.”

The process to construct RELTRAD was the same as RELTRAD16, using the religion at age 16 suite of variables (detailed above) and excluding the use of variable ATTEND. Please see [Appendix C](#) for the SAS code used to create RELTRAD16.

Due to the construction of RELTRAD and RELTRAD16, respondent counts and missing data will not match those of RELIG and RELIG16 across years. For example, RELTRAD uses attendance of religious services (ATTEND) and the respondent’s race (RACE), in addition to the religious preference variables. Because there is no measure for attendance of religious services at age 16, RELTRAD16’s construction does not include a comparable ATTEND variable. Please see [Appendix D](#) and [E](#) for respondent counts and missing data of RELTRAD and RELTRAD16 (respectively) across GSS years.

RESULTS

RELTRAD Variables

Exhibits 1 and 2 show weighted⁴ proportions from the 2024 GSS. Exhibit 1 shows that the nonaffiliated category has the highest proportion of respondents (28%), followed by Catholic (23.4%). The normally large Protestant group of RELIG (see Exhibit 3) is divided into three categories: evangelical Protestant (21.5%), mainline Protestant (9.6%), and Black Protestant (5%). The remaining categories of religious tradition include the Jewish faith (1.8%) and a category for other faiths (11%).

Exhibit 1. Respondent Religious Tradition (RELTRAD) in the 2024 GSS (n=2,989).

Religious Tradition	Weighted %
Evangelical Protestant	21.5
Mainline Protestant	9.6
Black Protestant	4.9
Catholic	23.4
Jewish	1.8
Other Faith	10.9
Nonaffiliated	27.9

Note: Proportions weighted with GSS weight WTSSPS. Missing values (e.g., “no answer”) are not shown.

Differing from the current religious tradition of respondents in Exhibit 1, Exhibit 2 shows that the Catholic category has the highest proportion of respondents’ religious tradition at age 16 (35.7%). The three Protestant categories are also slightly more distributed: evangelical Protestant (18.2%), mainline Protestant (14.2%), and Black Protestant (6.5%). The remaining categories of religious tradition at age 16 include the nonaffiliated category (14.1%), Jewish faith (1.9%), and a category for other faiths (9.4%).

Exhibit 2. Respondent at Age 16 Religious Tradition (RELTRAD16) in the 2024 GSS (n=3,002).

Religious Tradition	Weighted %
Evangelical Protestant	18.2
Mainline Protestant	14.2
Black Protestant	6.5
Catholic	35.7

⁴ All weighted proportions are weighted with GSS weight WTSSPS.

Jewish	1.9
Other Faith	9.4
Nonaffiliated	14.1

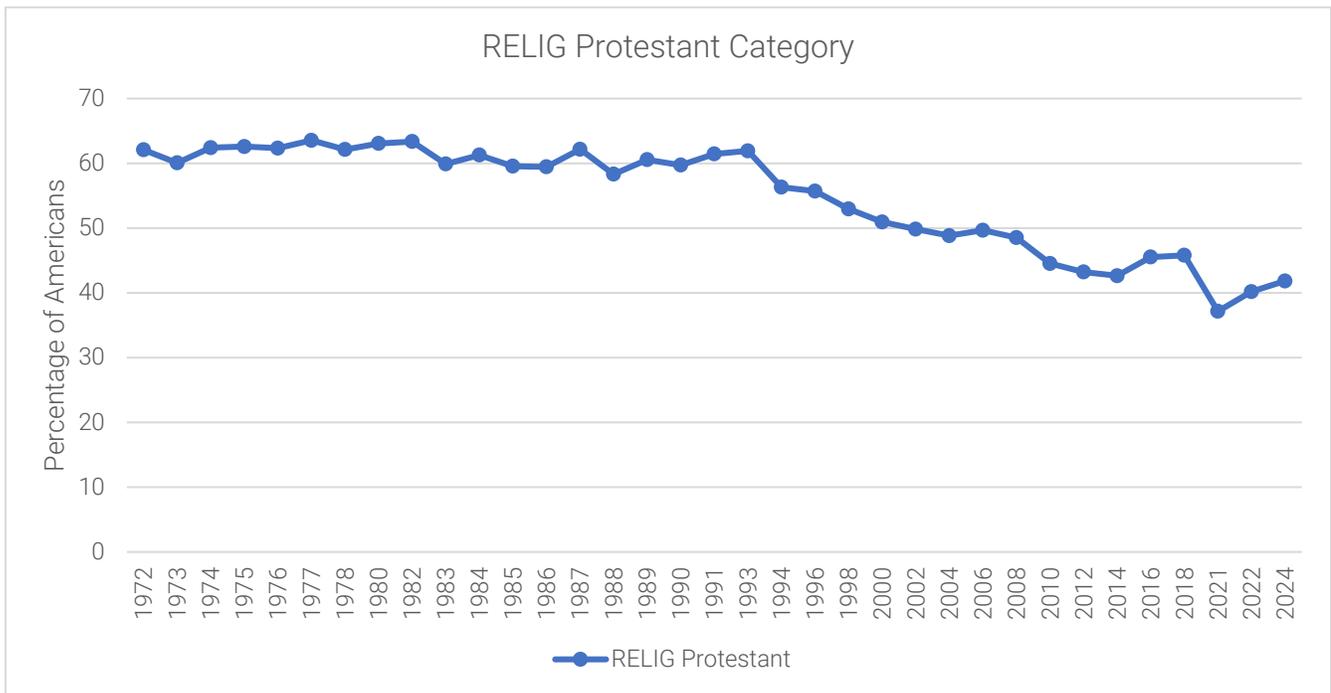

Note: Proportions weighted with GSS weight WTSSPS. Missing values (e.g., “no answer”) are not shown.

While the 2024 data is shown above, RELTRAD and RELTRAD16 have been applied through all applicable years. Users can access this data through gss.norc.org or the [GSS Data Explorer website](#).

Protestant Comparison of RELTRAD with RELIG

To demonstrate the added nuance that the variable RELTRAD brings to the GSS, Exhibit 3 reports the single Protestant category from RELIG across years, while Exhibit 4 reports all three Protestant categories in RELTRAD. The Protestant category represented in the GSS variable shows a consistent proportion of Protestant respondents throughout the 1970s and 1980s, then a slight decline beginning in the mid-1990s.

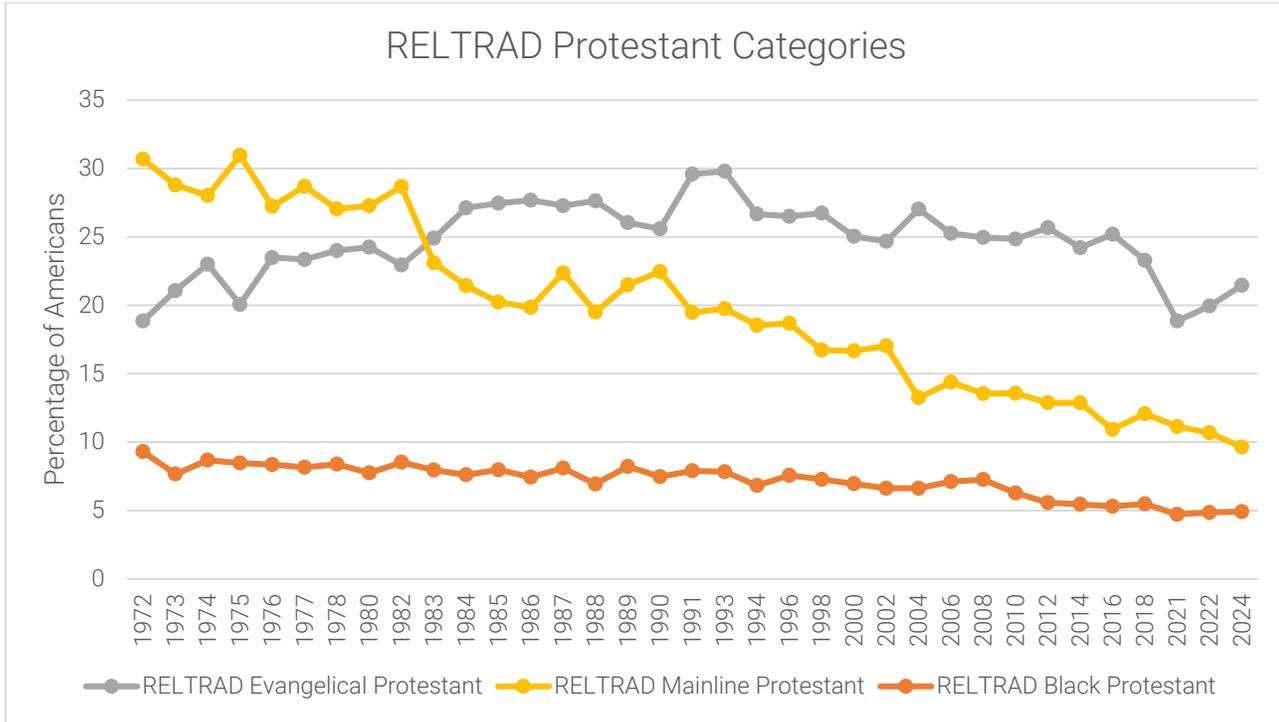

Exhibit 3. Protestant Religious Affiliation (RELIG), 1972-2024.

Note: Weighted with WTSSPS

Exhibit 4 shows three categories that make up the Protestant categories of religious tradition (RELTRAD). Two notable patterns include the decline of the Mainline Protestant category (31% in 1972 to 9.6% in 2024) and the fluctuating nature of the Evangelical Protestant category, which surpasses Mainline Protestants in 1983 at 23%. The Black Protestant category remains stable across 1970s to the early 2000s, and a slow decline in recent years.

Exhibit 4. Constructed Protestant Categories of Religious Tradition (RELTRAD), 1972-2024.

Note: Weighted with WTSSPS

DISCUSSION

The introduction of RELTRAD and RELTRAD16 to the GSS suite of religious identification variables (see [Appendix B](#) and [C](#)) provides a way to maintain religious stratification as seen through the many Protestant denominations in the U.S., while also minimizing risk to GSS respondents. By reconstructing a widely used, peer-reviewed typology (Steensland et al. 2000), the GSS’s inclusion of RELTRAD provides depth in its religious description by using other Protestant denominations (Shelton 2018), which breaks Protestants into three categories large enough to protect respondent confidentiality, and offers a solution to continue to study religious stratification among Protestants in the public data file.

In a future GSS release, we will explore variations of RELTRAD, including more religious traditions and the unassigned other Protestant denominations (variable OTHER) not covered by the originally proposed variable. Moreover, the GSS will continue to explore additional constructed variables to continue to preserve respondents’ religious affiliation in the data. This will further represent the rich religious traditions observed in the U.S. through GSS data.

RELTRAD was made available in Release 2 (R2), and RELTRAD16 was made available in Release 3 (R3) of the 2024 GSS. Researchers interested in the restricted religious preference variables not released in 2024 (see [Appendix A](#)) can email gss@norc.org or learn how to prepare a GSS Sensitive Data Application [here](#).

ACKNOWLEDGEMENT

The authors wish to acknowledge our reviewers for their contributions to this report: René Bautista, Michael Davern, and Tom W. Smith. This report was prepared with support from the National Science Foundation grant award 2049169.

APPENDIX A: RELIGIOUS IDENTITY VARIABLES

Below we include a table of religious identity variables in the GSS, organized by respondent religious preference, followed by the respondent’s religion at age 16, spouse’s religion, partner’s religion, and a version of respondent religion asked only on the 2022 GSS follow-on survey. Please see the GSS Codebook⁵ for more variables regarding religion, such as religious beliefs and practices.

Variable Name	Variable Label	Years Available	Important Notes
RELIG	R’s religious preference	1972-2024	
DENOM	Specific denomination	1972-2024	Coarsened to seven categories
DENOM_7222	Specific denomination	1972-2022	Not released in 2024
OTHER	Other protestant denomination	1972-2022	Not released in 2024
JEW	What sort of Jew R is	1988-2022	Not released in 2024
RELTRAD	Religious tradition	1972-2024	
NORELGSP	Is R atheist or agnostic	2021-2024	
FUND	Fundamentalism of R’s religion	1972-2024	
RELIG16	Religion in which R was raised	1973-2024	
DENOM16	Denomination in which R was raised	1973-2024	Coarsened to seven categories
DENOM16_7322	Denomination in which R was raised	1973-2022	Not released in 2024
OTH16	Other protestant denomination	1973-2022	Not released in 2024
JEW16	What sort of Jew R was at age 16	1988-2022	Not released in 2024
RELTRAD16	Religious tradition age 16	1973-2024	
NORELGSP16	R no religion age 16	2024	
FUND16	Fundamentalism of R’s religion age 16	1973-2024	
SPREL	Spouse’s religious preference	1973-2024	
SPDEN	Specific denomination, spouse	1973-2024	Coarsened to seven categories
SPDEN_7322	Specific denomination, spouse	1973-2022	Not released in 2024
SPOTHER	Other protestant denomination	1973-2022	Not released in 2024
SPJEW	What sort of Jew is R’s spouse	1988-2022	Not released in 2024
SPNORELGSP	Spouse no religion	2024	
SPFUND	Fundamentalism of spouse’s religion	1973-2024	
COREL	Partner’s religious preference	2012-2024	
CODEN	Partner’s denomination	2012-2024	Coarsened to seven categories
CODEN_1222	Partner’s denomination	2012-2022	Not released in 2024
COOTHER	Other protestant denomination	2012-2022	Not released in 2024
COJEW	What sort of Jew is R’s partner	2012-2022	Not released in 2024
CONORELGSP	Partner no religion	2024	
COFUND	Fundamentalism of partner’s religion	2012-2024	
RELIG_NEXT	Religion – Follow-on version	2022	2022 GSS Follow-On
DENOM_NEXT	Denomination – Follow-on version	2022	2022 GSS Follow-On
OTHER_NEXT	Other denomination - Follow-on version	2022	2022 GSS Follow-On

⁵ <https://gss.norc.org/content/norc/us/en/gss/get-documentation.html>

JEW_NEXT	What sort of Jew – Follow-on version	2022	2022 GSS Follow-On
FUND_NEXT	Religion fundamentalism – Follow-on version	2022	2022 GSS Follow-On

APPENDIX B: RELTRAD CODE

For transparency, we include the SAS code used in preparing RELTRAD for the public data release. We welcome feedback at GSS@norc.org from data users in order to correct any errors in the code below.

IF RELTRAD = . THEN RELTRAD = .Z;
END;

```

In order to verify our coding, we compared our code with that from Ryan Burge⁶ (co-author of the Stetzer and Burge (2015) article). Burge's Stata code (adjusted to account for a wider array of missing values, e.g., .D, .N, .S) produced the following distribution for RELTRAD using the R4 release of the 1972-2022 public use data:

```
. tab reltrad, missing
```

reltrad	Freq.	Percent	Cum.
evangelical	17,076	23.59	23.59
mainline	13,327	18.41	42.00
black protestant	6,088	8.41	50.41
catholic	17,244	23.82	74.23
jewish	1,422	1.96	76.19
other faith	3,852	5.32	81.52
nonaffiliated	9,895	13.67	95.18
.	3,486	4.82	100.00
Total	72,390	100.00	

Our version of RELTRAD for 1972-2022, using the R2 1972-2024 public use file, produces the following distribution:

```
. use gss7224_r2.dta
. tab reltrad if year < 2024, missing
```

religious tradition	Freq.	Percent	Cum.
evangelical protestant	17,076	23.59	23.59
mainline protestant	13,327	18.41	42.00
black protestant	6,088	8.41	50.41
catholic	17,244	23.82	74.23
jewish	1,422	1.96	76.19
other faith	3,852	5.32	81.52
